LIST OF PENDING CLAIMS

1-39. (Canceled)

40. (Currently Amended)   A method of establishing a communications call, including:

enabling an A party to select a B party from a database of a messaging network using an interactive device connected to a public network, said public network comprising a said messaging network,

utilizing said messaging network to access called address data for said B party from a public directory of said public network in response to selecting said B party,

sending said called address data for said B party and calling address data for the A party to a connection module of said public network; and

establishing a call between said A and B parties over said public network using said connection module and said called and calling address data.

41.(Currently Amended) A method of establishing a communications call, including:

enabling an A party to select a B party from a database of a messaging network using an interactive device connected to a public network; said public network comprising a said messaging network,

employing said messaging network to search for called address data for said B party using said interactive device and a search module of said public network and a database of said public network including called address data;

sending said called address data for said B party and calling address data for an A party to a connection module of said public network; and

establishing a call between said A and B parties over said public network using said connection module and said called and calling address data.

42.(Previously Presented) A method as claimed in claim 40 or 41, wherein said interactive device is a computer and/or telephony device including a visual display.

43. (Previously Presented) A method as claimed in claim 40, wherein said interactive device is

associated with said A party.

44. (Previously Presented) A method as claimed in claim 40, wherein said interactive device is a communications terminal for said call.

45. (Currently Amended) A method of originating a communications call, including:

enabling an A party to select a B party from a database of a messaging network using an interactive device connected to a messaging network of a public network, said public network comprising the messaging network; and

sending, in response to selection of said B party, selected party data corresponding to said B party to said public network;

whereby a connection module of said public network accesses called address data for said B party in a public directory on the basis of said selected party data to establish a call between an said A party and said B party.

46. (Currently Amended) A method of originating a communications call, including:

enabling an A party to select a B party from a database of a messaging network using an interactive device connected to a messaging network of a public network, said public network comprising the messaging network;

sending, in response to selection of said B party, selected party data corresponding to said B party to said public network;

obtaining said called address data from a public directory of said public network in response to a search for said B party using said selected party data; and

sending said called address data for said B party to a connection module of said public network for establishing a call between an said A party and said B party.

47. (Currently Amended) A method as claimed in claim 45 or 46, wherein said public network includes further comprises at least one public telecommunications network for connecting said A and B parties.

48. (Previously Presented) A method as claimed in claim 47, wherein said messaging network provides said interactive device with a plurality of B party data.

-3-

49. (Previously Presented) A method as claimed in claim 47, wherein said messaging network accesses and forwards said called address data to said telecommunications network.

50. (Currently Amended) An interface of an interactive device for originating a communications call, including:

a display controller for causing display of at least one B party from a database of a messaging network;

a selector for enabling an A party to select a B party on said display; and

a link which on being activated sends selected party data corresponding to said B party to a public network, whereby said public network accesses called address data of said B party in a public directory via a said messaging network on the basis of said selected party data and forwards said called address data to connection module of said public network to establish a call with said B party.

51. (Currently Amended) An interface of an interactive device for originating a communications call, including:

a search generator for generating a search of a messaging network database for a B party upon request from an A party using a public directory of a messaging network of a public network comprising said messaging network;

a data receiver for receiving results of said search;

a display controller for causing display of said results including at least one B party;

a selector for enabling an the A party to select a the B party on said display; and

a link which on being activated sends selected party data corresponding to said B party to a the public network, whereby said public network instructs a connection module of said public network to establish a call with said B party.

52. (Currently Amended) An interface as claimed in claim 51, wherein said results includes called address data for said B party data, and said selected party data includes called address data.

53. (Previously Presented) An interface as claimed in claim 50 or 51, wherein said interface is

-4-

sent to said interactive device by said public network on request from said interactive device.

54. (Currently Amended) An interface as claimed in claim 51, wherein said public network ~~includes~~ further comprises at least one public telecommunications network for establishing said call.

55. (Previously Presented) An interface as claimed in claim 50, wherein said interface includes a hypertext page and/or an applet for establishing said link.

56. (Currently Amended) An interface stored on an interactive device connected to a public network, including:

code for generating a display on an interactive device of B party data from a public directory of a messaging network;

code allowing an A party to select a B party from said B party data; and

code for transmitting to said public network selected party data corresponding to the selected B party and A party data;

whereby said public network accesses called address data for said B party in ~~a~~ said public directory of ~~a~~ said messaging network on the basis of said selected party data and establishes a call between an A party and a B party using said A party data and said called address data.

57. (Currently Amended) An interface stored on an interactive device connected to a public network, including:

code for obtaining B party data from a public directory of a messaging network ~~said public network~~;

code for generating a display on said device of B party data;

code allowing an A party to select B party from said B party data; and

code for transmitting to ~~said~~ a public network selected party data corresponding to the selected B party and A party data;

whereby said public network accesses called address data for said B party in a public directory of ~~a~~ said messaging network ~~of said public network~~ on the basis of said selected party data and establishes a call between ~~an~~ said A party and a B party using said A party data and said called address data.

58. (Previously Presented) An interface as claimed in claim 56, wherein said B party data includes called address data and said selected party data includes called address data for the selected B party.

59. (Previously Presented) An interface as claimed in claim 56 or 57, wherein said messaging network of the public network includes a TCP/IP messaging network and said public network further comprises at least one public switched telephone network for establishing said call.

60. (Currently Amended) A system for use in establishing a communications call, including:

a public directory accessible via a messaging network including called address data for parties connected to at least one public network;

an access module for transmitting said called address data for display on an interactive device, and for ~~receiving~~ utilizing the messaging network to receive selected party data from said interactive device to enable an A party to select a B party; and

a controller for receiving said selected party data, including called address data for the selected B party, and calling address data corresponding to the A party and generating, in response thereto, network control signals to cause said at least one public network to establish a call between said A party and said B party over said network.

61. (Currently Amended) A system for use in establishing a communications call, including:

a public directory database of a messaging network including called address data for parties connected to at least one public network;

an access module for receiving on said at least one public network selected party data corresponding to a B party ~~in response to a request~~ selected by an A party utilizing said public directory database of said messaging network and accessing called address data on the basis of said selected party data from said directory database; and

a network controller for receiving said called address data and calling address data corresponding to the A party and generating, in response thereto, network control signals to cause said at least one public network to establish a call between said A party and said B party over said network.

-6-

62. (Previously Presented) A system as claimed in claim 60 or 61, wherein said network includes at least one public telecommunications network, such as a PSTN, for receiving said control signals and establishing said call, and wherein the messaging network comprises the Internet, for passing data between the A party, the access module and the network controller.

63. (Previously Presented) A system as claimed in claim 61, wherein the access module includes directory data from said directory database for display by said A party.

64. (Previously Presented) A system as claimed in claim 60 or 61, including a search module accessible by said A party over said network for searching said directory database.

65. (Previously Presented) A system as claimed in claim 60 or 61, wherein said call is established with a terminal of the A party which selects said selected B party.

66. (Previously Presented) A system as claimed in claim 60 or 61, wherein said call is established with a terminal of the A party which is separate from the terminal selecting said B party.

67. (Previously Presented) A system as claimed in claim 60 or 61, wherein the address data includes a party terminal number and security information.

68. (Previously Presented) A system as claimed in claim 60, wherein at least one of the calling address data and the called address data includes account information.

69. (Currently Amended) A directory server for use in establishing a communications call on at least one public network, including:

   a directory database module for accessing public directory data of a messaging network, including communications address data, of parties connected to at least one public network;

   a call connection module for transmission of said public directory data to an interactive device of a user connected to a public network that comprises said messaging network and for accessing via said directory database module of said messaging network, for said interactive device, in response to a request of said user directory data of a B party using said directory

-7-

~~database module~~;

a call completion module for receiving selected party data for the B party of said call from said interactive device and transmitting a connect message to a communication module of said public network for establishing said call, said connect message including communications address data for said B party obtained using said directory database module.

70. (Currently Amended) A server for use in establishing a communications call on a public network, including:

a call connection module for transmission to an interactive device of a user <u>connected to a public network that comprises a messaging network</u> and for transmitting a connection message from said interactive device; said interactive device enabling the user to obtain party data for an A party and a B party from a public directory ~~accessible via~~ <u>by</u> utilizing said a messaging network;

a call completion module for receiving said connection message and forwarding a connect message to a communication module of a public network for establishing a call between A and B parties;

wherein said connection message includes data from ~~a~~ <u>said</u> public directory identifying at least said B party and said connect message includes communications address data for said A and B parties.

71. (Previously Presented) A server as claimed in claim 70, including a directory database module for accessing directory data, including communications address data, of parties connected to at least said public network, wherein the communications address data of said connect message for at least said B party is obtained using said directory database module.

72. (Previously Presented) A server as claimed in claim 69 or 70, comprising a TCP/IP server connected to a TCP/IP network, such as the Internet, and wherein the public network is a telecommunications network, such as the PSTN.

73. (Currently Amended) A method of establishing a call between parties, including:

<u>utilizing a public messaging network to allow an A party to select a B party from a public directory service of the public messaging network,</u>

-8-

~~receiving via a public messaging network a first message at a public directory service of
a public network~~ generating a first message in response to selection by ~~an~~ the A party of a
displayed element on an interactive device connected to the public messaging network, said first
message including identification of ~~a~~ the B party;

generating a second message in response to said first message, said second message
including communication addresses determined on the basis of said identification data; and

sending said second message to make calls to ~~parties~~ the A partry and the B party using
said communication addresses to establish a call between the parties.

74. (Previously Presented) A method as claimed in claim 73, wherein the identification data is
name data.

75. (Previously Presented) A method as claimed in claim 73, wherein the directory service is
adapted to access a database of public communications addresses stored against respective
identification data.

76. (Previously Presented) A method as claimed in claim 73, wherein selection of the displayed
element invokes generation of code on the interactive device to generate and send the first
message.

77. (Currently Amended) An interface of an interactive device connected to a public network
that comprises a messaging network, including:

a selectable displayed element which may be selected by a user of the device utilizing the
messaging network to select a B party; and

code for generating and sending a first message in response to selection of said displayed
element, to a public directory service of ~~a~~ said messaging network of the public network, said
first message including identification data of said B party,

wherein said directory service determines public communications addresses on the basis
of said identification data, and sends a second message to make calls to parties using said
communication addresses to establish a call between the parties.

78. (Previously Presented) An interface as claimed in claim 77, wherein the identification data represents a name.

79. (Currently Amended) A method of establishing a call, including:

receiving a call request from a client device over an IP link that connects the client device to the Internet, said call request including data identifying parties for said call;

utilizing the Internet to access a public directory ~~accessible via~~ on a messaging network to obtain data identifying terminal of at least one of said parties,

generating a connection message, in response to said call request, including data identifying terminals for said parties; and

establishing a call between said terminals in response to said connection message.

80. (Previously Presented) A method as claimed in claim 79, wherein said terminals include two telephones.

81. (Previously Presented) A method as claimed in claim 79, wherein said terminals include a telephone and said client device having a voice over IP application.

82. (Previously Presented) A method as claimed in claim 79, wherein said terminals include said client device and a further client device both having a voice over IP application.

83. (Previously Presented) A method as claimed in claim 79, wherein said call is established over a public network, such as the PSTN.

84. (Previously Presented) A method as claimed in claim 79, wherein said receiving and generating steps are executed by a server, such as a web server.

85. (Previously Presented) A method as claimed in claim 79, wherein said connection message is sent to network equipment that executes said establishing step.

86. (Previously Presented) A method as claimed in claim 79, wherein said call request is a HTTP request.

87. (Previously Presented) A method as claimed in claim 79, wherein said client device is a
computer device, such as a computer, handheld device or telephony device with a visual display.

88. (Previously Presented) A network system having components for executing the steps of a
method as claimed in claim 40, 41, 45, 46, or 73.

89. (Previously Presented) Computer software having code for executing the steps of a method
as claimed in claim 40, 41, 45, 46, or 73.
